Starting tip!

Following are some tips to get maximum out of this course:

If you have not gone through '**Learn Siemens S7-1200 PLC and HMI from Scratch using TIA course'**, kindly do not proceed in this course.

You really have to first start with 'Learn Siemens S7-1200 PLC and HMI from Scratch using TIA' course.

TIA Portal V15 + PLCSIM V15

You can practice along with the course via TIA Portal PLCSIM V15. Kindly download TIA Portal V15 along with PLCSIM V15. Just google it for it's link and start practicing the logic along with the course. This software will be valid for 21 days after that you have to buy the software license.

Don't skip instructions

Don't skip lessons, if you don't understand the command, ask me over. I would be glad to help you. If you skip any instructions, chances are you will see that being used in next lecture. So, if you skip even one instruction it won't help you later

Buy a PLC

If you really want to master PLC Programming I would recommend you to buy **S7-1200 PLC**. Although it is not important but if you save 250€ you can get a **Siemens S7-1200 PLC**. You would certainly have some advantage in learning over simulation software. If you can't find the PLC, write me. I will share a link.

Make notes!

Make notes! It's must! When you learn an instruction make some notes about it. Sometimes you may forget the proper syntax, so make as much notes as you can while watching the lessons.

That's it! If you follow these tips, you would get the best from this course.
